# **Elements of Groups 16, 17 and 18**

# **EXERCISE [PAGES 163 - 164]**

# **Exercise | Q 1.01 | Page 163**

# Select appropriate answers for the following.

Which of the following has highest electron gain enthalpy?

- 1. Fluorine
- 2. Chlorine
- 3. Bromine
- 4. lodine

**Solution:** Chlorine

## Exercise | Q 1.02 | Page 163

## Select appropriate answers for the following.

Hydrides of group 16 are weakly acidic. The correct order of acidity is \_\_\_\_\_.

- 1.  $H_2O > H_2S > H_2Se > H_2Te$
- 2.  $H_2Te > H_2O > H_2S > H_2Se$
- 3.  $H_2Te > H_2Se > H_2S > H_2O$
- 4.  $H_2Te > H_2Se > H_2O > H_2S$

#### Solution:

Hydrides of group 16 are weakly acidic. The correct order of acidity is  $H_2Te > H_2Se > H_2S > H_2O$ .

# **Exercise | Q 1.03 | Page 163**

# Select appropriate answers for the following.

Which of the following element does not show an oxidation state of +4?

- 1. 0
- 2. S
- 3. Se
- 4. Te

Solution: O

# Exercise | Q 1.04 | Page 163

Exercise   & 1.04   1 age 100		
Select appropriate answers for the following.		
HI acid when heated with conc. H <sub>2</sub> SO <sub>4</sub> forms		
HIO <sub>3</sub>		
KIO <sub>3</sub>		
l <sub>2</sub>		
KI		
Solution:		
HI acid when heated with conc. H <sub>2</sub> SO <sub>4</sub> forms I <sub>2</sub>		

# Exercise | Q 1.05 | Page 163

# Select appropriate answers for the following.

Ozone layer is depleted by \_\_\_\_\_.

- 1. NO
- 2. NO<sub>2</sub>
- 3. NO<sub>3</sub>
- 4. N<sub>2</sub>O<sub>5</sub>

## Solution:

Ozone layer is depleted by NO.

# Exercise | Q 1.06 | Page 163

# Select appropriate answers for the following.

Which of the following occurs in a liquid state at room temperature?

- 1. HIO<sub>3</sub>
- 2. HBr
- 3. HCI
- 4. HF

Solution: HF

# Exercise | Q 1.07 | Page 163

	Select appropriate answers for the following.
	In pyrosulfuric acid oxidation state of sulfur is
1.	only +2
2.	only +4
3.	+2 and +6
4.	only +6
	Solution:
	In pyrosulfuric acid oxidation state of sulfur is <b>only +6</b> .
	Exercise   Q 1.08   Page 163
	Select appropriate answers for the following.
	Stability of interhalogen compounds follows the order
1.	BrF > IBr > ICl > ClF > BrCl
2.	IBr > BeF > ICI > CIF > BrCl
3.	CIF > ICI > IBr > BrCI > BrF
4.	ICI > CIF > BrCI > IBr > BrF
	Solution:
	Stability of interhalogen compounds follows the order <u>CIF &gt; ICI &gt; IBr &gt; BrCI &gt; BrF</u>
	Exercise   Q 1.09   Page 163
	Select appropriate answers for the following.
	BrCl reacts with water to form
1.	HBr
2.	$Br_2 + Cl_2$
3.	HOBr
4.	HOBr + HCI

Solution:

BrCl reacts with water to form  $\underline{\text{HOBr} + \text{HCl}}$ .

**Exercise | Q 1.1 | Page 163** 

Select appropriate answers for the following.

Chlorine reacts with excess of fluorine to form \_\_\_\_\_.

- 1. CIF
- 2. CIF<sub>3</sub>
- 3. CIF<sub>2</sub>
- 4. Cl<sub>2</sub>F<sub>3</sub>

#### Solution:

Chlorine reacts with excess of fluorine to form CIF<sub>3</sub>.

# Exercise | Q 1.11 | Page 163

# Select appropriate answers for the following.

In interhalogen compounds, which of the following halogens is never the central atom?

- 1. I
- 2. CI
- 3. Br
- 4. F

Solution: F

## **Exercise | Q 1.12 | Page 163**

## Select appropriate answers for the following.

Which of the following has one lone pair of electrons?

- 1. IF<sub>3</sub>
- 2. ICI
- 3. IF<sub>5</sub>
- 4. CIF<sub>3</sub>

Solution: IF<sub>5</sub>

# **Exercise | Q 1.13 | Page 163**

## Select appropriate answers for the following.

In which of the following pairs, molecules are paired with their correct shapes?

- 1. [l<sub>3</sub>]<sup>-</sup>: bent
- 2. BrF<sub>5</sub>: trigonal bipyramidal
- 3. CIF<sub>3</sub>: trigonal planar

# 4. [BrF<sub>4</sub>]<sup>-</sup>: square planar

**Solution:** [BrF<sub>4</sub>]<sup>-</sup>: square planar

# **Exercise | Q 1.14 | Page 163**

# Select appropriate answers for the following.

Among the known interhalogen compounds, the maximum number of atoms is

- 1. 3
- 2. 6
- 3. 7
- 4. 8

#### Solution:

Among the known interhalogen compounds, the maximum number of atoms is 8.

# **Exercise | Q 2.01 | Page 163**

## Answer the following.

Write the order of the thermal stability of the hydrides of group 16 elements.

## Solution:

The decreasing order of thermal stability:  $H_2O > H_2S > H_2Se > H_2Te$ 

## **Exercise | Q 2.02 | Page 163**

## Answer the following.

What is the oxidation state of Te in TeO<sub>3</sub>?

#### Solution:

(Oxidation number of Te) + (Oxidation number of O) = 0

(Oxidation number of Te) +  $3 \times (-2) = 0$ 

Oxidation number of Te - 6 = 0

Hence, oxidation number of Te in  $TeO_3 = +6$ 

## **Exercise | Q 2.03 | Page 163**

## Answer the following.

Name two gases which deplete ozone layer.

#### Solution:

Two gases that deplete ozone layer: Nitric oxide (NO), chlorofluoro carbons (freons).

# **Exercise | Q 2.04 | Page 163**

## Answer the following.

Give two uses of ClO<sub>2</sub>.

## Solution:

- 1. ClO<sub>2</sub> is used as a bleaching agent for paper pulp and textiles.
- 2. It is also used in the water treatment.

# **Exercise | Q 2.05 | Page 163**

# Answer the following.

What is the action of bromine on magnesium metal?

#### Solution:

Bromine reacts with magnesium to form magnesium bromide.

$$\mathrm{Mg}_{(s)} + \mathrm{Br}_{2(l)} \longrightarrow \mathrm{MgBr}_{2(s)}$$
Magnesium Bromine Magnesium Bromide

## **Exercise | Q 2.06 | Page 163**

## Answer the following.

Write the names of allotropic forms of selenium.

#### Solution:

Allotropes of Selenium: Red and grey selenium

## **Exercise | Q 2.07 | Page 163**

## Answer the following.

What is the oxidation state of 'S' in H<sub>2</sub>SO<sub>4</sub>?

#### Solution:

(Oxidation number of H) + (Oxidation number of S) + (Oxidation number of O) = 0

$$2 \times (+1) + (Oxidation number of S) + 4 \times (-2) = 0$$

Oxidation number of S + 2 - 8 = 0

Hence, oxidation number of 'S' in  $H_2SO_4 = +6$ 

# **Exercise | Q 2.08 | Page 163**

## Answer the following.

The pKa value of HCl is - 7.0 and that of HI is -10.0. Which is the stronger acid?

#### Solution:

Smaller is the pK<sub>a</sub> value, greater is its acidity. Hence, HI is stronger acid than HCI.

## **Exercise | Q 2.09 | Page 163**

## Answer the following.

Give one example showing reducing property of ozone.

#### Solution:

Reaction showing reducing property of ozone is,

$$\underset{\text{Hydrogen peroxide}}{\text{H}_2\text{O}_2} + \text{O}_3 \longrightarrow \text{H}_2\text{O} + \underset{\text{Dioxygen}}{2\text{O}_2}$$

## **Exercise | Q 2.1 | Page 164**

## Answer the following.

Write the reaction of conc. H<sub>2</sub>SO<sub>4</sub> with sugar.

#### Solution:

The reaction is,

$$\overset{\text{C}_{12}\text{H}_{22}\text{O}_{11}}{\overset{\text{H}_2\text{SO}_4}{\longrightarrow}} \underset{\text{Carbon}}{\overset{\text{12 C}}{\longrightarrow}} + 11 \overset{\text{H}_2\text{O}}{\text{Water}}$$

## **Exercise | Q 2.11 | Page 164**

Write any two uses of Chlorine.

#### Solution:

#### **Uses of chlorine:**

- 1. Large quantities of chlorine are used industrially for bleaching wood pulp (required for the manufacture of paper and rayon), bleaching cotton and textiles.
- 2. It is used in the extraction of gold and platinum.
- 3. It is used for the manufacture of dyes, drugs and organic compounds such as

CCl<sub>4</sub>, CHCl<sub>3</sub>, refrigerants, etc.

- 4. It is used in sterilising drinking water.
- 5. It is used in preparation of poisonous gases such as phosgene (COCl<sub>2</sub>), tear gas (CCl<sub>3</sub>NO<sub>2</sub>), mustard gas (Cl.C<sub>2</sub>H<sub>4</sub>-S C<sub>2</sub>H<sub>4</sub>Cl).
- 6. It is used in the manufacture of DDT and BHC which are important insecticide.
- 7. It is used in the manufacture of vinyl chloride which is starting material for polyvinyl chloride plastics.
- 8. It is used in the manufacture of bleaching powder, aluminium chloride, hydrogen chloride, hypochlorites, chlorates, perchlorates, etc., which are important industrial compounds.

# **Exercise | Q 2.12 | Page 164**

# Complete the following.

$$ICI_3 + H_2O \rightarrow \underline{\hspace{1cm}} + \underline{\hspace{1cm}} + ICI$$

#### Solution:

$$ICI_3 + H_2O \rightarrow HIO_3 + 5HCI + ICI$$

# **Exercise | Q 2.12 | Page 164**

## Complete the following.

$$I_2$$
 + KCIO<sub>3</sub>  $\rightarrow$  \_\_\_\_\_ + KIO<sub>3</sub>

#### Solution:

$$l_2 + KClO_3 \rightarrow ICI + KlO_3$$

# **Exercise | Q 2.12 | Page 164**

#### Complete the following.

$$BrCl + H_2O \rightarrow \_\_\_ + HCl$$

#### Solution:

$$BrCl + H_2O \rightarrow HOBr + HCl$$

## **Exercise | Q 2.12 | Page 164**

# Complete the following.

$$\text{Cl}_2 + \text{CIF}_3 \ \rightarrow \underline{\hspace{1cm}}$$

#### Solution:

$$Cl_2 + ClF_3 \rightarrow 3ClF$$

## **Exercise | Q 2.12 | Page 164**

# Complete the following.

$$H_2C = CH_2 + ICI \rightarrow$$

#### Solution:

$$H_2C = CH_2 + ICI \rightarrow I - CH_2 - CH_2 - CI$$

# **Exercise | Q 2.12 | Page 164**

## Complete the following.

$$2XeOF_4 + SiO_2 \rightarrow + SiF_4$$

## **Solution:**

$$2XeOF_4 + SiO_2 \rightarrow 2XeO_2F_2 + SiF_4$$

# **Exercise | Q 2.12 | Page 164**

# Complete the following.

$$XeF_6 + H_2O \rightarrow \underline{\hspace{1cm}} + 2HF$$

## Solution:

$$XeF_6 + H_2O \rightarrow XeOF_4 + 2HF$$

# **Exercise | Q 2.12 | Page 164**

## Complete the following.

$$XeOF_4 + H_2O \rightarrow \_\_\_$$
 + HF

#### Solution:

$$XeOF_4 + H_2O \rightarrow XeO_2F_2 + HF$$

# **Exercise | Q 2.13 | Page 164**

## Match the following:

Α	В
XeOF <sub>2</sub>	Xenon trioxydifluoride

XeO <sub>2</sub> F <sub>2</sub>	Xenon monooxydifluoride
XeO <sub>3</sub> F <sub>2</sub>	Xenon dioxytetrafluoride
XeO <sub>2</sub> F <sub>4</sub>	Xenon dioxydifluoride

#### Solution:

Α	В
XeOF <sub>2</sub>	Xenon monooxydifluoride
XeO <sub>2</sub> F <sub>2</sub>	Xenon dioxydifluoride
XeO <sub>3</sub> F <sub>2</sub>	Xenon trioxydifluoride
XeO <sub>2</sub> F <sub>4</sub>	Xenon dioxytetrafluoride

# **Exercise | Q 2.14 | Page 164**

What is the oxidation state of xenon in the following compounds? XeOF<sub>4</sub>, XeO<sub>3</sub>, XeF<sub>6</sub>, XeF<sub>4</sub>, XeF<sub>2</sub>.

#### Solution:

Compound	Oxidation state of xenon
XeOF <sub>4</sub>	+ 6
XeO <sub>3</sub>	+ 6
XeF <sub>6</sub>	+ 6
XeF <sub>4</sub>	+ 4
XeF <sub>2</sub>	+ 2

## **Exercise | Q 3.01 | Page 164**

## Answer the following.

The first ionization enthalpies of S, Cl, and Ar are 1000, 1256 and 1520 kJ/mol<sup>-1</sup>, respectively. Explain the observed trend.

#### Solution:

- 1. The elements S, Cl, and Ar belong to third period of the periodic table.
- 2. Across a period, effective nuclear charge increases and atomic size decreases with increase in atomic number. Therefore, the energy required for the removal of an electron from the valence shell (I.E.) increases in the order: S < Cl < Ar.

# Exercise | Q 3.02 | Page 164

## Answer the following.

Acidic character of hydrides of group 16 elements increases from H<sub>2</sub>O to H<sub>2</sub>Te. Explain.

#### Solution:

The acidic character of the hydrides increases from  $H_2O$  to  $H_2Te$  because the bond dissociation enthalpy of the H–E bond decreases down the group. (where, E = O, S, Se, Te)

## **Exercise | Q 3.03 | Page 164**

## Answer the following.

How is dioxygen prepared in the laboratory from KClO<sub>3</sub>?

## Solution:

Dioxygen is prepared by heating potassium chlorate (KClO<sub>3</sub>) in presence of the catalyst, MnO<sub>2</sub>.

$$\begin{array}{ccc} 2 \, KClO_{3(s)} & \xrightarrow{Heat} 2 \, KCl_{(s)} + 3 \, O_{2(g)} \\ \text{Potassium chlorate} & \text{MnO}_2 & \text{Dioxygen} \end{array}$$

# **Exercise | Q 3.04 | Page 164**

## Answer the following.

What happens when lead sulfide reacts with ozone (O<sub>3</sub>)?

#### Solution:

Ozone oxidizes lead sulfide to lead sulfate

$$\begin{array}{c} PbS_{(s)} + 4\,O_{3(g)} \longrightarrow PbSO_{4(s)} + 4\,O_{2(g)} \\ \text{\tiny Lead sulfate} \end{array}$$

## **Exercise | Q 3.04 | Page 164**

## Answer the following.

What happens when nitric oxide reacts with ozone.

#### Solution:

Ozone oxidizes nitric oxide and gives nitrogen dioxide.

$$NO_{(g)} + O_{3(g)} \longrightarrow NO_{2(g)} + O_{2(g)}$$
Nitric oxide Ozone Nitrogen dioxide Dioxygen

## Exercise | Q 3.05 | Page 164

## Answer the following.

Give two reactions showing the oxidising property of concentrated H<sub>2</sub>SO<sub>4</sub>.

#### Solution:

Metals and nonmetals both are oxidized by hot, concentrated sulfuric acid which itself gets reduced to SO<sub>2</sub>.

1) 
$$Cu + 2H_2SO_4 \longrightarrow CuSO_4 + SO_2 + 2H_2O$$
 Copper sulfate Sulfur dioxide

2) 
$$S_{Sulfur} + 2H_2SO_4 \longrightarrow 3SO_2 + 2H_2O$$
 Sulfur dioxide

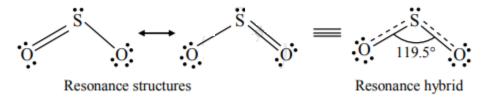

## Exercise | Q 3.06 | Page 164

# Answer the following.

Discuss the structure of sulfur dioxide.

#### Solution:

- 1) Sulfur dioxide is angular with O S O bond angle of 119.5°.
- 2) The S O double bond arises from  $d\pi$ -p $\pi$  bonding.
- 3) It is a resonance hybrid of two canonical forms as shown below:

## Exercise | Q 3.07 | Page 164

#### Answer the following.

Fluorine shows only –1 oxidation state while other halogens show –1, +1, +3, +5 and +7 oxidation states. Explain.

#### Solution:

- 1) The fluorine atom has no d-orbitals in its valence shell and therefore, cannot expand its octet. Thus, fluorine is the most electronegative exhibit –1 oxidation state only.
- 2) CI, Br, and I exhibit –1, +1, +3, +5, and +7 oxidation states. This is because they are less electronegative than F and possess empty d-orbitals in the valence shell and therefore, can expand the octet.

# Exercise | Q 3.08 | Page 164

## Answer the following.

What is the action of chlorine on Excess NH<sub>3</sub>.

#### Solution:

Chlorine when reacted with excess of ammonia gives ammonium chloride and nitrogen.

$$\begin{array}{c} 8~\mathrm{NH_3} \\ \mathrm{Ammonia~(excess)} + 3~\mathrm{Cl_2} \\ \end{array} \longrightarrow \begin{array}{c} 6~\mathrm{NH_4Cl} \\ \mathrm{Ammonium~chloride} \end{array} + \begin{array}{c} \mathrm{N_2} \\ \mathrm{Nitrogen} \end{array}$$

## Exercise | Q 3.08 | Page 164

## Answer the following.

What is the action of chlorine on Fe?

#### Solution:

Chlorine reacts with Fe to form ferric chloride.

$$2\operatorname{Fe} + 3\operatorname{Cl}_2 \overset{\Delta}{ o} 2\operatorname{FeBr}_3$$
Iron Chlorine Ferric chloride

# Exercise | Q 3.09 | Page 164

#### Answer the following.

How is hydrogen chloride prepared from sodium chloride?

## Solution:

1) In the laboratory, hydrogen chloride is prepared by heating sodium chloride (common salt) with concentrated sulfuric acid

$$\begin{array}{c} NaCl \\ Sodium \ chloride \\ \end{array} + \begin{array}{c} H_2SO_4 \\ Sulfuric \ acid \ (conc.) \\ \end{array} \xrightarrow{} \begin{array}{c} NaHSO_4 \\ Sodium \ hydrogen \ sulfate \\ \end{array} + \begin{array}{c} HCl \\ Hydrogen \ chloride \\ \end{array}$$

2) HCl gas can be dried by passing it through concentrated sulfuric acid.

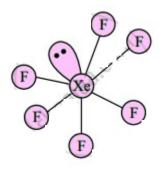

## Exercise | Q 3.1 | Page 164

# Answer the following.

Draw structures of XeF<sub>6</sub>

Solution:

structures of XeF<sub>6</sub>:

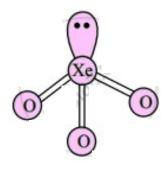

# **Exercise | Q 3.1 | Page 164**

# Answer the following.

Draw structures of XeF<sub>3</sub>

Solution:

structures of XeF<sub>3</sub>:

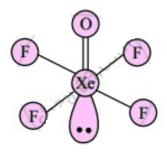

# **Exercise | Q 3.1 | Page 164**

# Answer the following.

Draw structures of XeOF<sub>4</sub>

Solution:

structures of XeOF<sub>4</sub>:

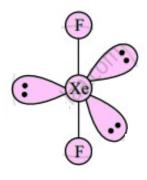

# Exercise | Q 3.1 | Page 164

# Answer the following.

Draw structures of XeOF<sub>2</sub>

## Solution:

## structures of XeOF<sub>2</sub>:

# **Exercise | Q 3.11 | Page 164**

# Answer the following.

What are interhalogen compounds? Give two examples.

#### Solution:

An interhalogen compound is a compound formed by a combination of atoms of different halogens.

e.g. CIF, BrF<sub>3</sub>

# Exercise | Q 3.12 | Page 164

# Answer the following.

What is the action of hydrochloric acid on NH<sub>3</sub>?

## Solution:

Hydrochloric acid reacts with ammonia and gives white fumes of ammonium chloride.

$$\begin{array}{c}
\operatorname{NH_3} \\
\operatorname{Ammonia}
\end{array}
+ \operatorname{HCl} \longrightarrow 
\begin{array}{c}
\operatorname{NH_4Cl} \\
\operatorname{Ammonium\ chloride}
\end{array}$$

# Exercise | Q 3.12 | Page 164

## Answer the following.

What is the action of hydrochloric acid on Na<sub>2</sub>CO<sub>3</sub>?

## Solution:

Hydrochloric acid reacts with sodium carbonate to give sodium chloride with the release of CO<sub>2</sub> gas.

$${
m Na_2CO_3} + {
m 2\,HCl} \longrightarrow {
m 2\,NaCl} + {
m H_2O} + {
m CO_2}$$
Sodium carbonate Hydrochloric acid Sodium chloride Water Carbon dioxide

## **Exercise | Q 3.13 | Page 164**

## Answer the following.

Give two uses of HCl.

#### Solution:

- 1. It is used in the manufacture of chlorine and chlorides such as ammonium chloride.
- 2. It is used in the preparation of aqua regia which is used to dissolve noble metals like gold.

# **Exercise | Q 3.14 | Page 164**

## Answer the following.

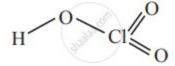

Write the names and structural formulae of oxoacids of chlorine.

#### Solution:

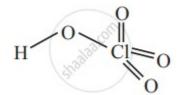

1) Hypochlorous acid, HOCI

2) Chlorous acid, HOClO or HClO<sub>2</sub>

3) Chloric acid, HClO<sub>3</sub>

## 4) Perchloric acid, HClO<sub>4</sub>

## **Exercise | Q 3.15 | Page 164**

## Answer the following.

What happens when Cl<sub>2</sub> reacts with F<sub>2</sub> in equal volume at 437 K.

#### Solution:

When Cl<sub>2</sub> reacts with F<sub>2</sub> in equal volume at 437 K, chlorine monofluoride is formed.

$$\begin{array}{ccc} \operatorname{Cl}_2 & + & \operatorname{F}_2 & \longrightarrow & 2 \operatorname{ClF} \\ \operatorname{Chlorine} & \operatorname{Fluorine} & & \operatorname{Chlorine\ monofluoride} \end{array}$$

# Exercise | Q 3.15 | Page 164

## Answer the following.

What happens when  $Br_2$  reacts with excess of  $F_2$ .

#### Solution:

When Br<sub>2</sub> reacts with excess of F<sub>2</sub>, bromine trifluoride is formed.

## **Exercise | Q 3.16 | Page 164**

## Answer the following.

How are xenon fluorides XeF<sub>2</sub>, XeF<sub>4</sub> and XeF<sub>6</sub> obtained? Give suitable reactions.

## Solution:

Xenon fluorides are generally prepared by direct reaction of xenon and fluorine in different ratios and conditions, such as temperature, electric discharge and photochemical reaction.

1) 
$$\underset{Xenon}{Xe} + \underset{Fluorine}{F_2} \xrightarrow{Sealed\ Ni\ tube} \underset{400^{\circ}\mathrm{C}}{Xenon\ difluoride}$$

2) 
$$\underset{\text{Xenon}}{\text{Xe}} + \underset{\text{Fluorine}}{\text{2 F}_2} \xrightarrow{\text{Electric discharge}} \underset{\text{Xenon tetrafluoride}}{\text{XeF}_4}$$
(1:5)

3) 
$$\frac{\mathrm{Xe}}{\mathrm{Xenon}} + \frac{2\,\mathrm{Fe_2}}{\mathrm{Fluorine}} \xrightarrow{\frac{\mathrm{Electric \, discharge}}{-80\,^{\circ}\mathrm{C}}} \frac{\mathrm{XeF_4}}{\mathrm{Xenon \, tetrafluoride}}$$

$$\text{4) } \underset{Xenon}{Xe} + \underset{Fluorine}{3} \underset{Fuorine}{F_2} \xrightarrow{\text{Electric discharge}} \underset{Xenon \ tetrafluoride}{XeF_6}$$

# Exercise | Q 3.17 | Page 164

## Answer the following.

How are XeF<sub>2</sub> and XeOF<sub>4</sub> prepared?

## Solution:

# 1) Preparation of XeO<sub>3</sub>:

Fluorides of xenon react with water to form XeO<sub>3</sub>.

i) 
$$3 \, \mathrm{XeF_4}_{\mathrm{Xenon \; tetrfluoride}} + 6 \, \mathrm{H_2O}_{\mathrm{Water}} \longrightarrow 2 \, \mathrm{Xe}_{\mathrm{Xenon \; trioxide}} + 12 \, \mathrm{HF} + 1 \frac{1}{2} \, \mathrm{O_2}$$

ii) 
$$\underset{\text{Xenon hexafluoride}}{\text{XeF}_6} + 3 \underset{\text{Water}}{\text{H}_2\text{O}} \longrightarrow \underset{\text{Xenon trioxide}}{\text{XeO}_3} + 6 \underset{\text{HF}}{\text{HF}}$$

# 2) Preparation of XeOF<sub>4</sub>:

Partial hydrolysis of XeF<sub>6</sub> yields XeOF<sub>4</sub>.

$$\underset{\text{Xenon hexafluoride}}{\text{XeF}_6} + \underset{\text{Water}}{\text{H}_2\text{O}} \longrightarrow \underset{\text{Xenon monooxytetrafluoride}}{\text{XeOF}_4} + \underset{\text{Hydrogen fluoride}}{\text{2 HF}}$$

## Exercise | Q 3.18 | Page 164

## Answer the following.

List the uses of Neon and argon gases.

#### Solution1:

## Uses of neon gas:

- (i) It is mixed with helium to protect electrical equipments from high voltage.
- (ii) It is filled in discharge tubes with characteristic colours.
- (iii) It is used in beacon lights.

## **Uses of Argon gas:**

- (i) Argon along with nitrogen is used in gas-filled electric lamps. This is because Ar is more inert than N.
- (ii) It is usually used to provide an inert temperature in a high metallurgical process.
- (iii) It is also used in laboratories to handle air-sensitive substances.

#### Solution2:

#### **Uses of Neon**

Neon is used in discharge tubes and fluorescent bulbs for advertisement display purposes. Glow'of different colours 'neon signs' can be produced by mixing neon with other gases. Neon bulbs and used in botanical gardens and in green' houses.

## **Uses of Argon**

Argon is used mainly to provide an inert atmosphere in high temperature metallurgical processes such as arc welding of metals and alloys. In the laboratory, it is used for handling substance which are air sensitive.

It is used in filling incandescent and fluorescent lamps where its presence retards the sublimation of the filament and thus increases the life of the lamp. It is also used in "neon signs" for obtaining lights of different colours.

## Exercise | Q 3.19 | Page 164

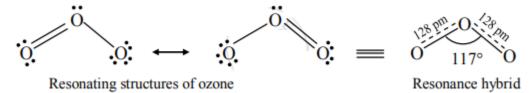

#### Answer the following.

Describe the structure of the Ozone. Give two uses of ozone.

#### Solution:

#### Structure of ozone:

Ozone  $(O_3)$  is an angular molecule. The two O-O bond lengths in the ozone molecule are identical, 128 pm, and the O-O-O bond angle of about 117°. It is a resonance hybrid of two canonical forms.

## **Exercise | Q 3.2 | Page 164**

## Answer the following.

Explain the trend in following atomic properties of group 16 elements:

Atomic radii

#### Solution:

#### Atomic radii:

The atomic radii increase down the group, as a result of an increase in the number of quantum shells.

## **Exercise | Q 3.2 | Page 164**

## Answer the following.

Explain the trend in following atomic properties of group 16 elements:

Ionisation enthalpy

#### Solution:

#### **lonisation enthalpy:**

The ionisation enthalpy decreases down the group due to an increase in the atomic size. Group 16 elements have less ionization energy than the corresponding group 15 elements.

# **Exercise | Q 3.2 | Page 164**

## Answer the following.

Explain the trend in following atomic properties of group 16 elements:

Electronegativity

#### Solution:

## **Electronegativity:**

The electronegativity decreases down the group. Oxygen has the highest electronegativity next to fluorine amongst all the elements.

#### **Exercise | Q 4.1 | Page 164**

## Answer the following.

Distinguish between rhombic sulfur and monoclinic sulfur.

#### Solution:

The following are the points of difference between rhombic ( $\alpha$ -sulfur) and monoclinic ( $\beta$  -sulfur):

Rhombic sulfur (α-sulfur)	Monoclinic sulfur (β- sulfur)
1. It is a pale yellow coloured solid.	1. It is bright yellow solid
2. It forms orthorhombic crystals	2. It forms needle-shaped monoclinic crystals
3. Its melting point is 385.8 K.	3. Its melting point is 393 K.
4. Its density is 2.06 g/cm <sup>3</sup>	4. Its density is 1.98 g/cm <sup>3</sup>
5. It is insoluble in water and soluble in CS <sub>2</sub>	5. Soluble in CS <sub>2</sub>
6. It is stable below 369 K and transforms	6. It is stable above 369 K and transforms
to β-sulfur above this temperature	into α-sulfur below this temperature.
7. It is prepared by the evaporation of rolls sulfur in CS <sub>2</sub> .	7. It is prepared from rhombic sulfur.

## **Exercise | Q 4.2 | Page 164**

## Answer the following.

Give two reactions showing the oxidising property of concentrated H<sub>2</sub>SO<sub>4</sub>.

#### Solution:

Metals and nonmetals both are oxidised by hot, concentrated sulfuric acid which itself gets reduced to SO<sub>2</sub>.

1) 
$$\text{Cu} + 2 \text{ H}_2 \text{SO}_4 \longrightarrow \text{CuSO}_4 + \text{SO}_2 + 2 \text{ H}_2 \text{O}$$
 Copper sulfate  $+ \text{Sulfur dioxide}$ 

2) 
$$\frac{S}{Sulfur} + \frac{2 H_2 SO_4}{Sulfuric \ acid \ (Conc.)} \longrightarrow \frac{3 SO_2}{Sulfur \ dioxide} + 2 H_2 O$$

## **Exercise | Q 4.3 | Page 164**

## Answer the following.

How is SO<sub>2</sub> prepared in the laboratory from sodium sulfite?

#### Solution:

In laboratory, sulfur dioxide is prepared by treating sodium sulfite with dilute sulfuric acid.

$$\begin{array}{c} Na_{2}SO_{3(aq)} + H_{2}SO_{4(aq)} \longrightarrow SO_{2(g)} + Na_{2}SO_{44(aq)} + H_{2}O_{(l)} \\ \text{Sodium sulfite} & \text{Sulfuric acid (dil)} & \text{Sulfur dioxide} & \text{Sodium sulfate} \end{array}$$

# **Exercise | Q 4.4 | Page 164**

## Answer the following.

Describe the manufacturing of H<sub>2</sub>SO<sub>4</sub> by the contact process.

#### Solution:

Sulfuric acid is manufactured by the contact process, which involves the following three steps.

## 1) Roasting in air:

Sulfur or sulfide ore (iron pyrites) on burning or roasting in air produces sulfur dioxide.

i) 
$$S_{(s)} + O_{2(g)} \stackrel{\Delta}{\to} SO_{2(g)}$$
 Sulfur dioxide

ii) 
$$4\operatorname{FeS}_{2(\mathrm{s})} + 11\operatorname{O}_{2(\mathrm{g})} \overset{\Delta}{ o} 2\operatorname{Fe}_2\operatorname{O}_{3(\mathrm{s})} + \operatorname{8SO}_{2(\mathrm{g})}$$
 Sulfur dioxide

# 2) Catalytic oxidation of sulfur dioxide:

i) Sulfur dioxide is oxidised catalytically with oxygen to sulfur trioxide, in the presence of  $V_2O_5$  catalyst.

$$2\operatorname{SO}_{2(\mathrm{g})} + \operatorname{O}_{2(\mathrm{g})} \stackrel{\operatorname{V_2O_5}}{\longrightarrow} 2\operatorname{SO}_{3(\mathrm{g})}$$
Sulfur dioxide

ii) The reaction is exothermic and reversible and the forward reaction leads to decrease in volume. Therefore, low temperature (720K) and high pressure (2 bar) are favourable conditions for maximum yield of SO<sub>3</sub>.

# 3) Absorption, followed by dilution of sulfur trioxide gas:

i) Sulfur trioxide gas (from the catalytic converter) is absorbed in concentrated H<sub>2</sub>SO<sub>4</sub> to produce oleum.

$$\underset{\text{Sulfur trioxide}}{\text{SO}_3} + \underset{\text{Oleum}}{\text{H}_2\text{SO}_4} \longrightarrow \underset{\text{Oleum}}{\text{H}_2\text{S}_2\text{O}_7}$$

ii) Dilution of oleum with water gives sulfuric acid of desired concentration.

$${
m H_2S_2O_7 + H_2O \longrightarrow 2\,H_2SO_4 \atop {
m Sulfuric\ acid}}$$

iii) The sulfuric acid obtained by contact process is 96-98 % pure.
