PROBABILITY DISTRIBUTIONS

Random Variable

G. KARTHIKEYAN THIRUVARUR DT

A random variable x is a function defined on a sample space s into the real numbers R such that the inverse image apoints or subset or interval of R is an event in S, for which probability is assigned.

Exercise 11.1

A random variable x is said to be a discrete random variable If the range of X is countable.

probability mass function (PMF)

If x is a discrete random variable with discrete values $x_1, x_2, \dots, x_n, \dots$ then the function f or P defined by $f(x_k) = p(x = x_k)$, for $k = 1, 2, \dots, n$.

Its called PMF.

* $f(x_k) > 0$ for $k = 1, 2, \dots, n$ and $x \leq f(x_k) = 1$
